KEYNOTE DAY ONE

Brian Hamm

Live Curious, Go Beyond

Brian believes that every student can be engaged in an educational experience that compels them to 'Live Curiously and Go beyond' as they discover their own "Moonshots". Over the past ten years he has circumnavigated the globe numerous times in the pursuit of this endeavor. In this Keynote Brian explores Design Thinking and educational prototypes which compel students to engage with passion.

KEYNOTE DAY TWO

Kim Pollishuke

Let's Build An Elevator To The Moon

As children, anything is possible and our imaginations span as wide as the universe. As we grow, the wonder of childhood fades, and the realities of the world limit our dreams. Let's explore what we need to make the impossible possible and build an elevator to the moon!

KEYNOTE DAY TWO

Michael Wacker

Connected Compassion

Are the things we want to see in our children when they are grown, the same things we teach in school? Our children have the information of the world at their fingertips, access to "friends" around the world with the push of a button, but why are we seeing more bullying, less empathy, and a disconnect from what we "really" want for our children. What could it look like if a classroom/school/ district were anchored to service, community responsibility, empathy and ethical treatment of each other? Children need Adults that love and care about them. Teaching and designing around empathy, service, and compassion may just generate the connected leaders and learners awesome enough to change the world.

PRE-SUMMIT WORKSHOPS: OCTOBER 18, 2018

A - Design Thinking

Design Thinking is about believing in an intentional process that leads to new, relevant solutions, creates a positive impact, and makes a difference.

Participants in this workshop will experience the 5 stages of the Design Process.

B - Visible Thinking with Digital Portfolios

If done correctly, digital portfolios should serve as a window into student thinking and understanding. In this day long workshop, you will learn the pedagogy behind effective and purposeful student portfolios. You will leave with a solid understanding of the best tools in G Suite Edu.

COORDINATOR MESSAGE:

Across BC we, educators, are challenged to shift our practice. We have the opportunity to ask our students to think about their thinking every step of the way; from peer issues to formal class debate, from building a tower with blocks to digitally designing 3D models, from listening to their favourite song to creating their own ostinato to accompany a peer's poem and from their first day of Kindergarten to their final presentation of their capstone project. We have access to digital tools that can help us to capture our students and take them forward as they learn about themselves and the world around them.

Attend the EdTech Summit and be empowered!
